Burpeeana Early Asters

**New, extra early,
long stem asters
created by Burpee**

1663 All Colors Mixed This new Burpee strain of asters is particularly noteworthy because of its desirable, uniformly upright, compact habit of growth; also because it comes into bloom extremely early.

Burpeeana Early flowers are globular, double, 3 to 4 in. across, with attractively incurved petals somewhat resembling the American Beauty in shape. They range from snowy white through shell-pink, rose, crimson, blue, violet to purple—practically all colors known in asters.

Burpeeana Early Asters, in many localities, come into full bloom before aster wilt or aster yellows may make their appearance. In our plantings, these new asters reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems. Ideally suited for cutting and garden.

**Pkt. 25¢; 2 pkts. 45¢;
1/16 oz. \$1.00; 1/8 oz. \$1.85;
1/4 oz. \$3.50; oz. \$12.50**

Other Asters, pages 29 to 32

Burpeeana Early Aster plants are of erect, base branching growth (see picture below), average 20 in. in height, with many stems per plant, each stem being unusually strong and topped with a flower of splendid form and substance. These terminal flowers come into bloom at about the same time, thus making a grand showing in the garden. The sturdy, upright plants permit close planting so that more can be grown in a given area.

Burpee's LARKSPURS

One of the most beautiful and desirable early annual flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. Sow seed early as they like cool weather in which to germinate and to grow best. We offer your choice of four distinct types.

Burpee Wonder—Erect, unusually long spikes

Created on Burpee's Floradale Farms

The distinctive feature of these extraordinary larkspurs is their habit of growth. Strong, upright spikes are produced from the base, presenting a solid, erect, column-like appearance, the upper half being covered with large double flowers, 1½ in. across. These extremely long-stemmed larkspurs are especially desirable for all cut-flower purposes and a row of them in the garden is most striking. They grow about 3½ ft. tall and stand heat remarkably well. Three splendid colors are available.

Burpee's NASTURTIIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil; if overly rich it will cause plants to produce more leaves than flowers. They are most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and semi-tall or dwarf growing. Their varied colors, different shapes and refreshing fragrance make them most desirable for cutting. Few flowers ever introduced have been acclaimed so quickly and praised so highly as double nasturtiums. The ever popular Golden Glean was the first double to be grown from seed. Since then we have created double nasturtiums in all the best colors.

Semi-Tall Giant Double Nasturtiums

Flowers are extra large, exquisitely sweet-scented, double and semi-double with eight or more petals; plants are semi-tall and splendid for beds, broad borders or as ground covers. May be trained upon strings or wire. Valuable for cutting, as flowers keep for a long time.

2331 Semi-Tall Giant Double, Mixed Colors
Wonderful array of colors from pale primrose through yellow, salmon-pink and salmon to deep maroon and mahogany. Many of the flowers are peculiarly variegated or blotched.
Pkt. 10¢; oz. 40¢; 2 ozs. 75¢; ¼ lb. \$1.45

2321 Orange Glean Deep orange, with dark mahogany zone at base of the upper petals. Effective combination of these colors.

2326 Burpee's Scarlet Fiery, vivid orange-scarlet—the most brilliant in the tall double group. Large flowers in greatest profusion.

2313 Tigered Flowered Mixed Flowers are of many bizarre markings; some contrastingly blotched or mottled in the most strikingly different and irregular patterns. Unique and interesting.

Dwarf Giant Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems, which makes them especially fine for cutting. Eight or more irregularly placed petals give the blooms an unusually artistic appearance. Plants are uniformly dwarf, rounded and covered with flowers. Most attractive in beds, borders, edgings, rock gardens and pots. We offer a wide assortment of the best colors.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced early and most profusely.

2306 Delightful Soft salmon-cerise, upper petals oddly marked crimson-maroon at base. Flowers become deeper salmon-cerise with age.

2336 Garnet Gem Deep, rich, very bright garnet-red. The delightfully sweet-scented flowers have enough orange suffusion to enliven them with an iridescent glow that is most pleasing. Striking color.

2329 Golden Globe All-America Silver Medal Winner. Exquisite, giant double and semi-double, pure golden yellow blooms of great beauty.

2346 Mahogany Gem Darkest colored nasturtium we have ever seen; flowers are of a rich velvety, deep but brilliant mahogany.

2348 Primrose Gem Giant double, sweet-scented, soft primrose colored flowers are freely produced throughout the entire season.

2327 Scarlet Globe Showy, giant double and semi-double, sweet-scented, fiery scarlet blooms.

New Types of Snapdragons

1580 Burpee's Velvet Giant All-America Bronze Medal Winner. An outstanding, vigorous growing snapdragon, 2 1/2 ft. tall, individual plants producing 6 to 12 towering spikes each filled with many nicely placed flowers which are larger than the other regular or diploid varieties here listed. A velvety texture adds richness to the deep crimson blooms, while an undertone of orange-bronze showing through the crimson lightens up the color and gives it life. Long stems of uniformly spaced flowers make Velvet Giant a top-notch antirrhinum for cutting and garden decoration, as well as for exhibition purposes.

Pkt. 25¢; 1/16 oz. \$1.00; 1/8 oz. \$1.75

1525 Burpee's Fairy Rose is different from all other snapdragons—the flowers are smaller and more sprightly, stems slender with more of them produced on a plant. It has great appeal for garden use and cutting, especially where a light, airy, graceful effect is desired. Plants produce numerous erect spikes, 2 ft. tall, studded with slim, crisp flowers, 2 in. long and 1 in. across at the flare of lower lip. The general color of the standard is rose bengal; the rounded portion of the lower lip is sulphur-yellow which softly suffuses the standard and the flare of the lower lip to create a delicate shade of apricot.

From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement. Color range is excellent. There are clear whites, creamy white, white with lavender suffusion, light yellow, bright yellow, golden yellow with some yellows flushed pink, rose-orange to scarlet-orange, lovely pinks from delicate salmon to deep rose, lavender, crimson, and bronze shades. 1610 Burpee Double Flowers are rich, deep golden yellow throughout, except for the back of the buds which are flushed with rose-pink. When fully open, the pink coloring disappears entirely. The central spike grows about 28 in. tall and flowers first, followed by many lateral branches which come from the main stem near the base of the plant. All the lateral stems bloom at the same time so that the plants produce a great mass of color in beds or borders. Fragrant.

1608 Floradale Double Formation of the flowers is similar to Burpee Double, perhaps more double and several shades lighter in color—a soft Dresden yellow. On the unopened buds, there is a pale rosy blush which disappears as soon as they open. Flowers are quite large, with many open at once and closely placed on $2\frac{1}{2}$ ft. spikes.

The central spike grows 3 ft. tall and blooms ahead of the laterals, three to five of which arise from the main stems close to the ground. Frequently, the flower-spikes are more than half the height of the plants so they always attract immediate attention.

BURPEE'S TETRA SNAPDRAGONS

Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting; having good substance adds to their keeping value. Wherever seen, they are sure to demand admiration.

1561 Tetra Candlelight Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Particularly rich and beautiful.

1563 Tetra Crimson Very large, deep but bright, velvety crimson flowers closely set on long, broad, tapering spikes above the dark green, thick textured foliage.

1571 Tetra Pink Shades Exquisite variations from pale shell-pink to deep rose. The tapering spikes are well filled with large, nicely formed, well placed flowers.

1564 Tetra Shades of Rose Especially selected for those who prefer the clearer, deeper shades of rose for their garden or for cutting. A most appealing blend.

1567 Tetra Sunset Hybrids Pleasing color blend of bronze and yellow shades ranging from primrose-yellow flushed pink to rose suffused orange. Much admired.

1568 Tetra White Creamy white changing to pure white with age; primrose throat which adds considerably to the beauty of the large, attractively formed flowers.

BURPEE'S GIANT PANSIES

2513 Giant Fancy Pansy
Burpee Blend
Pkt. 35¢

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a warm hotbed six to eight weeks before your usual outdoor planting time.

2513 Burpee Blend of Giant Fancy Pansies

A carefully prepared mixture of the highest quality. Plants are selected for their vigor and the way they hold their flowers well above the foliage; blooms are of the largest size and of the most beautiful colors, including blotched varieties; many crinkled at the edges.

HYBRID PETUNIAS

True first generation (F₁) hybrids, the result of crossing two distinct parent varieties by hand pollination

Hybrid petunias are really outstanding, each seed is produced by carefully controlled crossing by hand of two distinct parent lines. This is very costly but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with larger flowers and considerably more of them per plant than either parent. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the plants. Wonderful for beds, borders and excellent for cut flowers.

2486 Pink Sensation

All-America Bronze Medal Winner

Plants are extremely vigorous, 2 ft. tall, as much as 4 ft. in width, and completely covered with flowers, 3 in. across. The color is light rose-pink with deeper pink veining extending well out toward the edges from the white throat which is finely etched with brown. A metallic lustre adds life and sparkle. Hybrid vigor is surely evident in this lovely multiflora hybrid petunia.

NEW MULTIFLORA SWEET PEAS

3597 **Mixed Colors** As the name indicates, the outstanding characteristic of this new class of sweet peas, which distinguishes them from other varieties, is that more flowers are borne to a stem when plants are well grown. Flowers are of medium size, stems are remarkably long and strong. The number of blooms to a stem seems to vary with the color—fives and sixes are common, sevens and more are often seen. Many of the flowers are strikingly waved. In color they range from pure white through shades of pink and rose, orange-cerise, lavender, etc. Plants are vigorous, free blooming, rather early; flowers are wonderful for cutting.

Sweet Pea testing grounds, Burpee's Floradale Seed Farms, California. The Early Flowering varieties at the peak of bloom

Early Flowering SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—usually 3 to 4 weeks earlier than the Burpee Giant varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. All types of sweet peas prefer an open, sunny location, and deep, rich soil which must be well drained.

Burpee's CALENDULAS

SCOTCH OR POT MARIGOLDS

These calendulas are far superior to the old-fashioned varieties in many respects; flowers are larger, longer stemmed, fuller and of richer colors. Those offered on this page are extra large-flowered and double to the very center, except where noted. Calendulas are of easiest culture, succeeding in ordinary, well-drained soil and, where summers are not too hot, plants will bloom from early summer until frost and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring. In hot sections, another sowing may be made in early summer to furnish blooms in the cool fall days. Plants grow 15 to 24 in. tall, depending on the variety and locality.

BURPEEANA EXTRA EARLY ASTERS

Shown in color on inside front cover

1663 All Colors Mixed This new Burpee strain of asters is particularly noteworthy because of its desirable, uniformly upright, compact habit of growth; also because it comes into bloom extremely early. Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals, ranging from snowy white through shell-pink, rose, crimson, blue, violet to purple—all the aster colors.

Plants are of erect, base branching growth, average 20 in. in height, with many stems per plant, each stem being unusually strong and topped with a flower somewhat resembling the American Beauty in shape. These terminal flowers come into bloom at about the same time, thus making a grand showing.

Burpeeana Early Asters, in many localities come into full bloom before aster wilt or aster yellows may make their appearance. In our plantings, these new asters reached the peak of their bloom two weeks or more earlier than Queen of the Market, with larger and better shaped flowers and longer, stronger stems.

On the left is a plant of Queen of the Market Early asters in comparison with the new Burpeeana Extra Early asters on the right. Seeds were sown at the same time. Queen of the Market is only in bud, while Burpeeana Extra Early is in full bloom. Note, too, the erect habit of growth of Burpeeana Extra Early, and the greater number of flowers per plant.

Burpee's Early Asters

These very early flowering varieties begin to bloom soon after Burpeeana—flowers are of different shapes and the plants rather open in growth. Extreme earliness and good stems make them a most welcome type of aster for early cutting. All were created by Burpee on Floradale Seed Farms.

1607 Heavenly Blue Large, feathery, beautifully formed flowers, 4 in. and more across, of an exquisite azure or light lavender-blue color. Petals are long, narrow, prettily interlaced, the smaller ones gracefully curling over the center. Plants are of spreading growth, well branched, 2 ft. tall, bloom early; stems up to 16 in. long. Wonderful for cutting.

Pkt. 25¢; $\frac{1}{8}$ oz. 75¢; $\frac{1}{4}$ oz. \$1.40

1605 Early Bird First flowers appear very early and the plants will continue to produce their colorful carmine-rose flowers for several weeks. Blooms are double, $3\frac{1}{2}$ in. across, with the petals evenly placed to form a most symmetrical flower. Plants grow 15 in. and more high and branch freely. As flowers age, outer petals become tipped lighter rose.

1603 Navy Blue All-America Winner. Large flowered aster; rather close in form to that of the Giant Crego type. The flowers grow about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich, luminous, deep velvety purple-blue color. Attractive. Plants grow about 20 in. tall. Pkt. 25¢; $\frac{1}{8}$ oz. 70¢; $\frac{1}{4}$ oz. \$1.30

1631 Peerless Yellow Soft, pleasing shade of light yellow; lovely for cutting. Plants branch freely and grow 2 to 2½ ft. tall; blooms, 3 in. across, are freely produced from midseason until frost. The best of the light yellow asters and the only one of its color that we list.

Pkt. 25¢; $\frac{1}{8}$ oz. 75¢; $\frac{1}{4}$ oz. \$1.40

HOW TO GROW ASTERS

Asters are easy to grow. They prefer rich, well-drained soil and a warm, sunny location. For earliest blooms, sow seed indoors in boxes or seed-pans four to six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm. A continuous display of flowers from early summer until frost can be had by planting the new Burpeeana and other early, midseason and later blooming varieties. Asters have long lasting qualities, so are wonderful for cutting.

BURPEE HYBRID ZINNIAS

Burpee Giant Hybrid Zinnias are the loveliest new flowers ever created. They include both first and second generation hybrids with the result that the flowers are bigger than those of the dahlia flowered zinnias. And, being hybrids, there is a pleasing variation in the petal formation, the majority being of the informal fluffy or ruffled type, some attractively curled, others gracefully quilled. The feathery, loosely arranged petals give the flowers an airy appearance, free of the stiffness often associated with other zinnias. As easy to grow as any zinnias.

Their glistening beauty, stem length and keeping quality make them one of the most popular of all cut flowers. The plants are strong growing, free blooming, 2½ to 3 ft. tall and ideal for garden decoration. Highly prized for exhibition.

2822 Eskimo

There are also unusual two- and three-color combinations of soft and light shades in some of the individual blooms. When an occasional pale lavender or light orange appears, it is always a tone that blends well with the others.

Flowers are deep, 5 to 5½ in. across, larger than dahlia flowered and are composed of numerous big, flat petals curled under at the ends. Plants are strong growing, 3 to 4 ft. tall, well-branched so that an abundance of long-stemmed giant flowers is assured for cutting.

EVERLASTINGS AND STRAWFLOWERS

With the exception of Job's Tears, Briza maxima and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. Briza maxima holds its panicles when dried and may be used alone or with dried flowers. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and Briza maxima grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Celosia (Cockscomb), page 27, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

DOUBLE LARGE FLOWERED STOCKS

Heavy spikes of handsome, fragrant flowers, like small rosettes, are produced in a wide range of soft and distinct shades. Fine for bedding, borders and cutting. For best results, sow seed indoors in shallow boxes or seed-pans 6 to 8 weeks before your usual outdoor planting time. Keep in a temperature of 65° F. or less from the time the seed is sown until the plants have made 8 leaves so that they will form buds. When plants are large enough to handle, pot them up singly and transplant to the garden when weather gets warm. BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms. Sow seeds early so that you will have stronger plants to go through the winter and give more bloom the next spring and summer.

Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

*Burpee's
Big Boy
Giant Hybrid*

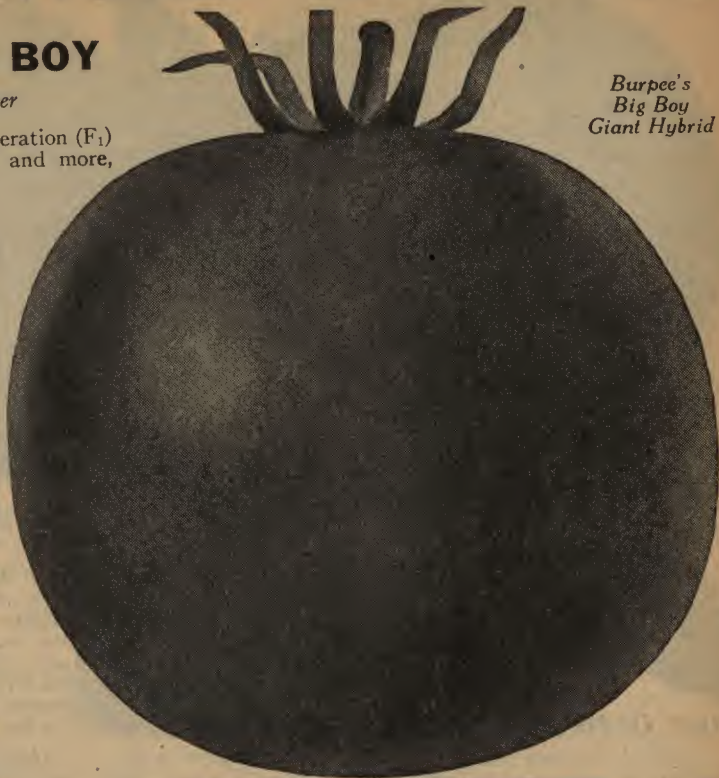

78 days. Largest of our true, first generation (F₁) Hybrid tomatoes; many weigh 1 lb. and more, average is 10 ozs. Unlike other large fruited varieties, Big Boy tomatoes are perfectly smooth, deep globe to deep oblate in shape and very firm; scarlet-red skin, thick walls, with bright red meaty flesh of fine flavor and excellent quality. At its peak of performance in midseason, although large fruits are produced late in the season when many standard varieties decline in yield and size. Ideal hybrid for the home and market grower, especially roadside sales.

Plants are very large, extremely vigorous, semi-upright to spreading; moderately dense dark green foliage protects the fruits from sun scald.

Important—Please Read HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes have the ability to produce larger plants and higher yield they must be fed more than standard tomatoes. Therefore, to produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of planting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom or set their first fruit. Keep watered during dry spells.

Each hybrid tomato seed is produced by hand pollination which requires a great deal of work and entails a heavy expense. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop. Extra care will repay you in better fruits and a bigger yield.

1132 BURPEE HYBRID

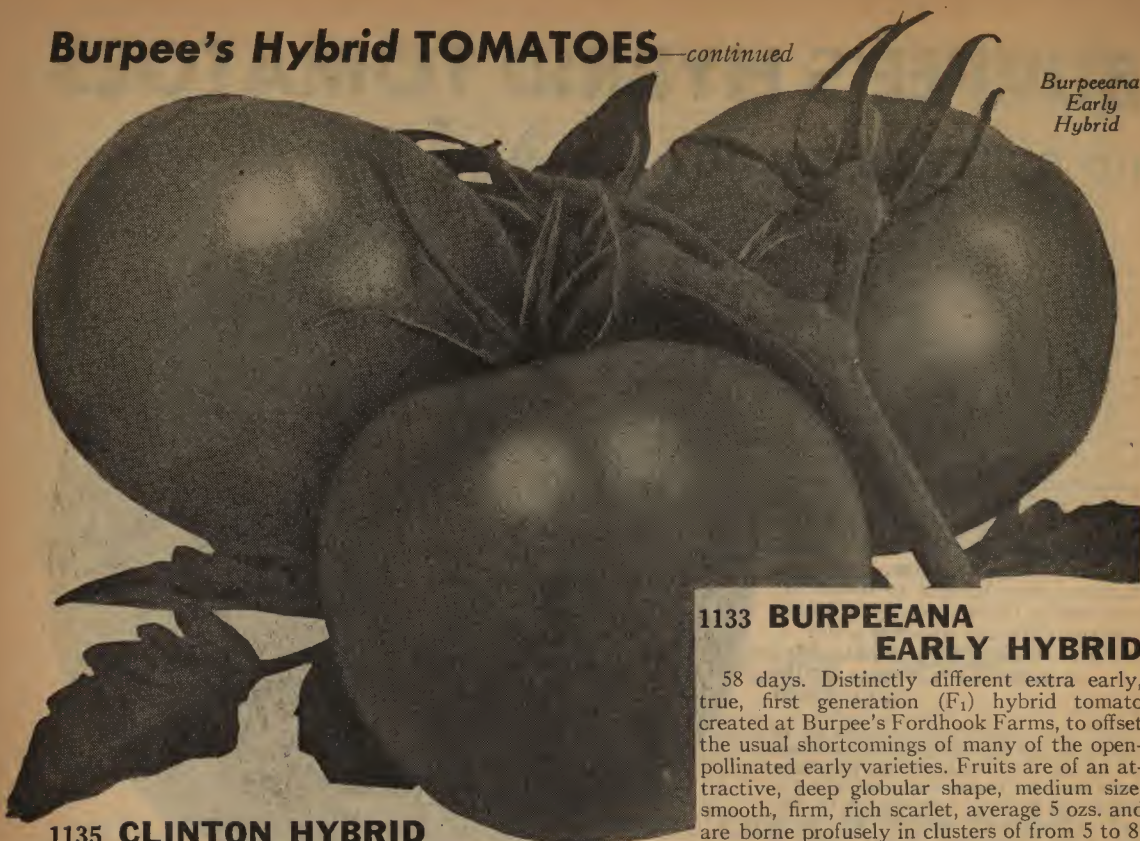

70 days. An all-purpose, main-crop, true, first generation (F₁) hybrid outstanding for the quality and rich flavor of its fruits. It is a great producer; earlier and more prolific than such well-known varieties as Marglobe or Rutgers. Fruits are medium to large, firm, thick walled, average 8 ozs. in weight, deep globular in shape, scarlet-red in color; flesh is meaty and of excellent quality. Has proved itself to be a valuable tomato of wide adaptation for the home garden, market grower, "green wrap," canning and long-distance shipping. Highly recommended.

1133 BURPEEANA EARLY HYBRID

58 days. Distinctly different extra early, true, first generation (F₁) hybrid tomato created at Burpee's Fordhook Farms, to offset the usual shortcomings of many of the open-pollinated early varieties. Fruits are of an attractive, deep globular shape, medium size, smooth, firm, rich scarlet, average 5 ozs. and are borne profusely in clusters of from 5 to 8.

Burpeeana Early has produced the highest early yield of all varieties of tomatoes wherever tested and continues to bear throughout the season. Especially worthwhile in Canada, New England States, Northern States (Nebraska, North Dakota, etc.) where other varieties are too late unless planted early. Quality is excellent; flavor is mild. Plants are of indeterminate growth, vigorous open habit.

Mulching tomato plants with a heavy layer of straw to retain soil moisture usually results in larger yields over a longer period of time, cleaner fruits, less cracking and less loss from blossom-end rot; it keeps down weeds, too, which is quite important.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

Follow the Bull's Eye

We have used this mark, , for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, , usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

POLE BEANS

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. Support must be given the vines, which grow 5 to 8 ft. and more high. Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type. The most popular and dependable varieties of pole beans are Kentucky Wonder, McCaslan (green-pod) and Kentucky Wonder Wax (yellow-pod). Horticultural is grown largely as a shell bean.

72 Kentucky Wonder ☉ — *Brown seeded; round pods*

Though thick, the pods appear slender on account of their length. The light brown seeds have a distinctive, tasty flavor which makes them so highly desirable for use as shell beans. How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is passed and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles, except Scarlet Runner, a pkt. of which is enough for 8 poles; 1 lb. for 60 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

Bush LIMA BEANS

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush or the newer Triumph). Some prefer one type for eating fresh, another as dry beans or freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size. For dried beans, pods should be left on the plants until fully matured.

65 Burpee's Fordhook —Most popular bush lima

Introduced by Burpee in 1907 and named for Burpee's Fordhook Farms.

75 days. The leading variety of bush lima beans for home garden, freezing or commercial use. Pods are 4 to 4½ in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans whose dry, mealy quality and delicious flavor, not unlike chestnuts, are familiar to everyone who uses lima beans. Plants are bushy, upright, 20 in. or more in height, with a spread of 2 ft. or more; very vigorous, with many pod-bearing lateral branches. Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes. Buy from originator.

How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground; it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is larger than that for bush limas. Many persons prefer the flavor of pole lima beans to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the medium-thick (Burpee's Big 6), while others prefer the flat-seeded (Burpee's Giant Podded), some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

100 Burpee's Big 6 — Introduced by Burpee in 1950

88 days. Longest podded pole lima, 6 to 7 in. long, $1\frac{1}{8}$ in. wide with usually 6 large, medium-thick, tender beans of the choicest quality and flavor. Beans have a good green color which is retained to a great extent when cooked. Plants are tall growing, excellent climbers, vigorous, dependable and heavy croppers. We recommend it most highly for home garden, market, canning and freezing. In some sections, customers have reported only 5 beans to a pod. On our farms, Burpee's Big 6 averages one more bean per pod than Giant Podded or King of the Garden and grows about 1 in. longer than either of these varieties.

106 Burpee's Giant Podded — Introduced by Burpee in 1910

90 days. The largest beans of all pole limas. Pods are $5\frac{1}{2}$ to 6 in. long, $1\frac{1}{4}$ in. wide, with 4 or 5 extra large, oval-flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 ft. and freely produce their pods in clusters of 4 to 8.

Pkt. 15¢; $\frac{1}{2}$ lb. 45¢; lb. 80¢; 2 lbs. \$1.50; 5 lbs. \$3.50

105 Burpee's Best — Introduced by Burpee in 1935

92 days. A pole bean with all the good characteristics of Fordhook Bush—thick seed, rich tenderness, larger pods with three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 4 to $4\frac{3}{4}$ in. long, $1\frac{1}{4}$ in. broad, and $\frac{1}{2}$ to $\frac{3}{4}$ in. through, well filled with 4 or 5 big, plump, "potato" type beans that are exceptionally tender and have a distinctive nutty flavor. Excellent for freezing, shipping, home and market.

103 Carolina or Sieva — "Butter Bean"

78 days. Pods grow 3 to $3\frac{1}{2}$ in. long, and contain 3 or 4 small, flat, smooth beans of splendid quality. Quick to bear; especially valuable in sections with short summers, where large-seeded varieties are too late to produce well, and in localities with hot summers where pods often fail to set. Grown extensively in the South where it is known as Butter Bean or Small White Lima. Vines grow 9 to 10 ft. tall, hardy, vigorous, and heavy yielding. Beans medium green; white when dried.

How to Grow Pole Lima Beans

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant about 10 ft. Pole Beans may also be planted the same way.

White Marrowfat Bush Shell Beans

BUSH SHELL BEANS

Extensively grown for use as dry beans

Great Northern, Red Kidney, White Marrowfat and Michilite are grown mostly as dried beans for winter use; Dwarf and French Horticultural for green shelled beans, although pods may be used, when young, as snap beans. Culture is similar to that recommended for bush beans on page 70, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 73, are also desirable as shell beans.

56 Great Northern 90 days. Oval, dark green, inedible pods 3 to 4 in. long, filled with white, medium large, dry beans; excellent for boiling, baking and soup. Very flavorful.
Pkt. 10¢; ½ lb. 35¢; lb. 60¢;
2 lbs. \$1.10; 5 lbs. \$2.50

Pods are 6 in. long, flat, light green; beans are large, kidney-shaped, pinkish red to mahogany, and are in great demand either baked, boiled, in soups or certain Spanish and Mexican dishes. GIANT BUTTER or FAVA BEAN

Mammoth pods with 5 to 7 lima-like beans

24 Long Pod 85 days. The well-known Broad Beans, much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. Pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Dry seed is large, circular, flat, reddish brown with black eye. A pkt. will plant 15 ft. of row; 1 lb. 75 ft. Recommended for both home and market gardeners.

Bansei Edible Soy Beans

BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous, 2½ ft. and more in height. They should be staked or given some other form of support.

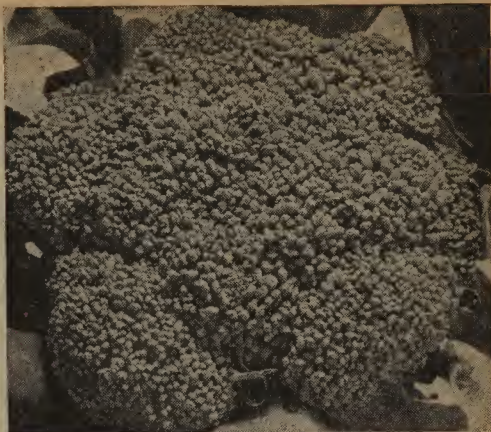

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow the seeds early in hotbed or house; transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3000.

157 Calabrese 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Be sure to keep green sprouts cut off before the flower buds open.

156 De Cicco 78 days. Very similar in every way to Calabrese but ready a week earlier. Recommended highly for home and market.

De Cicco, Italian Green Sprouting Broccoli

BRUSSELS SPROUTS

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1¼ to 1½ in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seedbed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Easily grown thus becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

Pkt. 20¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

CHICORY—Delicious, appetizing salad

297 Witloof (French Endive) 110 days. A choice salad delicacy of mildly acrid flavor for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover the nubbins with 6 to 8 in. of soil and keep in place with boards set along the sides for four to six weeks when a pure white blanched stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use.

Pkt. 20¢; ½ oz. 50¢; oz. 90¢

CORN SALAD—Lamb's Lettuce

351 Large Leaved Round 60 days. Quick growing plant for early spring, late fall or winter use. It is quite hardy, producing an abundance of gray-green rounded leaves which are sometimes served like lettuce but are better if mixed with more piquant "greens." Pkt. 15¢; ½ oz. 40¢; oz. 70¢

COLLARDS—One of the best boiling "greens"

299 Georgia 80 days. Erect, spreading plants, 2 to 3 ft. tall with large, juicy, green leaves which are usually stripped from the plants as they mature thus providing delicious boiling "greens" of fine quality throughout the entire season. Will stand light freezing which improves the mild cabbage-like flavor of the leaves. Sow seeds outdoors in the spring when soil and weather have become thoroughly warm. *Seed crop is short.*

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00

CRESS—Easy, quick growing "green"

364 Fine Curled (Pepper Grass) 40 days. Grows very quickly and is of the easiest culture. Burpee's TABLE BEETS

Burpee's Red Ball—the outstanding round beet for all purposes

121 Burpee's Red Ball Ⓢ—Excellent

Shown in color on the back cover

60 days. Introduced by Burpee in 1904. Remarkable for its uniform shape, deep colored flesh, and sweet flavor. The roots are globe-shaped, growing to 3 in. in diameter, with smooth, deep red skin and medium-small tap-root. Flesh is tasty, extremely dark red, free from woody fiber, and under good growing conditions, is practically free from lighter colored zones. Its intense dark red color especially fits it for table use. For a market where dark red colored flesh is a primary requirement, for canning, freezing or any commercial use, Red Ball is highly recommended. Medium tall, red and green, erect growing foliage tops. One of the best red beets for the home gardener.

Pkt. 25¢; oz. 55¢; ¼ lb. \$1.50; ½ lb. \$2.50; lb. \$4.00

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Space rows 1½ to 2 ft. apart and cover seed with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 2 to 3 in. apart in the row. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

Beets are easily grown and are delicious as baby beets when roots are half grown, or they may be used from then on until they reach their full size. Tops are highly palatable when cooked as "greens" or young beets with their tops may be cooked together. Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs or leaf-stalks as asparagus; we offer the best varieties of Chard on page L13.

Burpee White—sweetest of all table beets

130 Burpee White—Distinct

60 days. Introduced by Burpee in 1952. Roots are white, top-shaped to nearly round, with a fairly heavy tap-root. Occasionally the roots have a slight pink tint on the shoulders. This coloring is only on the skin, and does not run into the interior flesh, which is pure white, tender, firm, crisp, and entirely without fibers. The quality is excellent, being similar to but sweeter than any red table beet we have ever tasted. Tops are large and vigorous, of a shiny, medium green color; excellent for "greens."

Pkt. 25¢; oz. 60¢; ¼ lb. \$1.75

115a Detroit Dark Red, Short Top Ⓢ

60 days. Widely used round beet for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red; always sweet and tender. Smaller tops allow beets to stand closer together in the row.

Pkt. 15¢; oz. 40¢; ¼ lb. 95¢; ½ lb. \$1.65; lb. \$2.85

115 Detroit Dark Red, Medium Top

59 days. Beets are perfectly round with deep red skin. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above. Splendid for the home garden, market, shipping, freezing and canning.

Pkt. 15¢; oz. 40¢; ¼ lb. 95¢; ½ lb. \$1.65; lb. \$2.85

125 Early Wonder—Valuable for home and market

55 days. Semi-globe-shaped, about 3 in. across, with medium size tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Burpee's Earliest CABBAGE

*Burpee's
Copenhagen Market*

192 Burpee's Copenhagen Market ⊙

First introduced in America by Burpee in 1911

72 days. An outstanding strain notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yield, convenient size, attractive shape, solidity and fine quality combine to make Copenhagen Market the popular early cabbage it is today. The flavor of the crisp, tender, white interiors is remarkably fine so that it is also desirable for early kraut making.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.00

*Early Jersey
Wakefield*

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing. Chinese Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage.

175 Golden Acre ⊙—Round heads

63 days. Has all the wonderful characteristics of our Copenhagen Market, but the heads are a trifle smaller and mature 9 days earlier. They are very uniform, solid, round, 6 in. in diameter, and weigh 3½ to 4 lbs. each—a most satisfactory size for the average family; in quality, they cannot be surpassed. Plants are small and compact, which permits close planting. A valuable extra-early cabbage for the home garden and a profitable one for truckers; extensively grown for shipping.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.00

182 Bonanza — Excellent quality

75 days. The outstanding characteristic of this new early-midseason cabbage is that it makes hard heads at all stages of growth. Early in the season, heads are small, firm, almost round, and perfectly uniform, yet will continue to grow and remain hard to reach maximum size, about $6\frac{1}{2}$ in. across and weigh 4 lbs. each. Has a very short core so is quite slow to go to seed. Can be used early to late in the season. If you want a firm, small headed cabbage for home use, market or shipping, especially for long distances, we strongly recommend Bonanza.

Heads are hard and solid. Stands hot weather unusually well. Recommended for "yellows"-infested land as it is highly resistant to "yellows" as well as cabbage mosaic. On soils not infested with "yellows," plant non-resistant All Seasons or other non-resistant varieties.

How to Grow Cabbage

For earliest crop, start early and midseason cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a cold-frame or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become warm. A pkt., except O-S Cross, will produce about 250 plants; oz. about 2000 plants. Days to maturity are from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows $2\frac{1}{2}$ ft. apart; the large midseason and late varieties 2 ft. apart in rows $2\frac{1}{2}$ to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family, had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

214 Chihli ⊙ 73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are very crisp and tender; broad, smooth and fringed at the edges. Extensively grown for market because the large heads sell readily; most popular for the home garden where the longest head is wanted.

212 Pe-Tsai 78 days. Large Cos Lettuce-like heads 12 to 14 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanching, tender, juicy, and has an agreeably pungent flavor either eaten raw like lettuce or cooked like cabbage. For home or market use.

Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.50

Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when used with cucumbers, onions, peppers, etc., in mustard chow-chow. Cauliflower is best grown as a fall crop in the greater part of the U. S., although in regions where summers are cool, sowings may be made indoors 30 to 40 days before time to set plants out in your garden.

Where plants must first be grown, days to maturity given in descriptions are from the time the plants are set in the garden. The time is average and may vary somewhat in different seasons and sections.

*Burpeeana
Cauliflower*

2 pkts. 55¢; ¼ oz. \$1.40; ½ oz. \$2.50; oz. \$4.50

245 Burpee's Dry Weather

95 days. Introduced by Burpee in 1899. Though cauliflower does best in a cool and moist season, Dry Weather is drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting other cauliflowers to head, try Dry Weather.

Pkt. 25¢; ¼ oz. \$1.00; ½ oz. \$1.90; oz. \$3.70

How to Grow Cauliflower

For a main or fall crop, sow the seed thinly in a specially prepared seed bed or coldframe about 4 months before your first expected frost. Thin out from time to time to allow ample room for development. It is important that cauliflower seedlings are not allowed to become crowded in the plant bed. When plants are ready to be set in the garden, space them 1½ to 2 ft. apart, in rows 2½ to 3 ft. apart. They must always be kept in a healthy growing condition until heads are formed. Any stunting of growth, due to lack of moisture or low fertility, may prove harmful to the crop. A packet will produce about 150 plants; 1 oz. 4000.

252 Improved Holland Erfurt

85 days. An especially fine strain of this important variety; very popular in leading cauliflower sections. Plants are fairly short stemmed, really uniform in maturity; heads are white, hard, compact and definitely of the true Erfurt type of which this is the best strain. Suitable for freezing.

Pkt. 25¢; ¼ oz. \$1.25; ½ oz. \$2.25; oz. \$4.25

251 Early Snowball—A

258 Veitch's Autumn Giant

130 days. The finest late cauliflower; immense, compact white heads, 8 to 10 in. across. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive. Require a long season to develop.

Pkt. 20¢; ¼ oz. 95¢; ½ oz. \$1.75; oz. \$3.00

WINTER CAULIFLOWER

155 St. Valentine Broccoli 150 days. Large, solid, white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in California and other places on the Pacific Coast, where season is long and weather remains cool.

Burpee's CARROTS

May be used at different stages of growth but are at their best if eaten when half grown or smaller. There are varied sizes and shapes to suit your purposes as well as soil conditions; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soils to Burpee's Improved Long Orange for deep mellow soils—the popular medium length carrot for all general purposes is Burpee's Goldinhardt. 223 Burpee's Oxheart — Dependable producer

75 days. First introduced in America by Burpee in 1884. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 4 to 4½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling. Good winter keeper.

240 Large Yellow Belgian — For stock feeding

100 days. Very productive carrot with roots 12 to 18 in. long. The skin below the ground is lemon-yellow, but above the soil surface it is green. Will yield heavily, especially in deep, mellow soil. How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. If too crowded, plants will grow slowly so that small, misshapen roots and unsatisfactory yields may be produced. This is especially true of all root crops. Do the thinning while plants are still small so as to disturb the roots of remaining seedlings as little as possible and be sure to firm the soil back around the plants left in the row. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall; these are the best for winter storing or may be used for immediate table use. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

272 Burpee's Fordhook ☉

130 days. Introduced by Burpee in 1915 and named for Burpee's Fordhook Farms. The best fall and winter celery in existence. Plants are stocky, compact, 15 to 18 in. tall and while comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. An ideal variety for winter storage. We offer our improved strain.

CELERIAC

(Turnip-Rooted or Knob Celery)

293 Giant Prague 120 days.

The edible portion is the large, thick root, which may be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Celeriac has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand for winter use.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

Hybrid Yellow SWEET CORN

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year, and may we remind you to plant Burpee Seeds, the Best Seeds that Grow.

Hybrid White Sweet Corn

Stowell's Evergreen Hybrid

To enjoy Sweet Corn at its best, it should be eaten as soon as possible after ears are pulled; any delay causes loss of sweetness and quality. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties.

How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 8 to 12 in. apart. Some prefer to sow 4 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 or 3 plants to remain in a group. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

Burpee Hybrid Cucumber

ORIGINATED ON BURPEE'S FORDHOOK FARMS
and introduced by us in 1945

370 Burpee Hybrid 60 days. High resistance to mosaic and downy mildew are the outstanding attributes of this true, first generation (F₁) hybrid, white spine, slicing type cucumber. Vines are extremely vigorous, long lived and bear an abundance of well formed, straight, dark green fruits of handsome appearance, 8 in. and more long, 2½ in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality. Burpee Hybrid is a high-class cucumber for the home garden, market grower, shipper and greenhouse culture; yes, hydroponics, too. (See testimonial at right.)

Gardeners everywhere write us of the wonderful results they are having with this cucumber. Hundreds of testimonials could be printed but space does not permit; we have selected one of special interest because plants were grown in water instead of soil.

"—I am a hydroponic farmer, rotating the crops between cucumbers and tomatoes. I have experimented with other seed than Burpee's. My statement is, that no other cucumber can be compared with the Burpee Hybrid. At my last planting I used 4 ozs. of seed which has given a yield of over 300 bushels, practically all fancies, with a very small amount of choice, and a very low percentage of culls. Plants were kept healthy and productive at a height of from 8 to 10 ft. . . ." C. F. Sterling, Miami, Fla.

NOTE: Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plants with a small part of the stem attached.

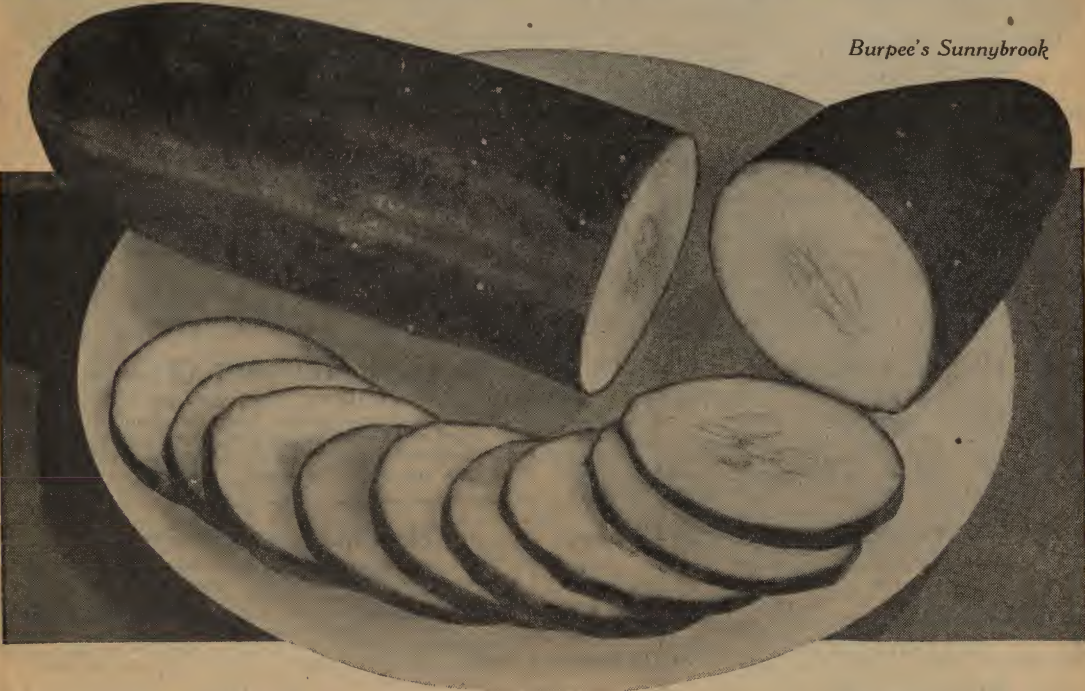

Burpee Hybrid Cucumber (foreground) has such high resistance to mosaic and downy mildew that it outyields open pollinated varieties (in background) because the vines continue to produce for a long time after others have ceased.

Burpee's CUCUMBERS

May be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger foreign varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers, plant Burpee Hybrid listed on the opposite page. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is truly a top-notch.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers, offered on page 92, are black-spined; all others, with the exception of Improved Long Green, are white-spined.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with $\frac{1}{2}$ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis.

Burpee's EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which time the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost. A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or seed-pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

Burpee's Butterhead LETTUCE

Butterhead lettuce develops well-folded heads of good form and resembles a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. In hot weather sections, they may not head as readily as the crisp-head varieties but will grow rapidly and produce tender, tasty leaves of delicious flavor. This group includes a number of well-known varieties.

476 Burpee's Wayahead ☉

77 days. Introduced by Burpee in 1907. Highly recommended as a spring and fall lettuce for planting in the open or in frames. It is a vigorous, healthy variety, forming plants of medium size with shiny, bright green, blistered foliage and few outer leaves. The buttery heart is a beautiful creamy yellow. Heads well under adverse conditions, making it a favorite for home garden use and nearby market sales. Sweet, crisp and tender.

Pkt. 15¢; oz. 50¢; ¼ lb. \$1.35

475 Big Boston—Popular

Heads particularly well during cool weather of early summer and fall. White Boston is similar in size and shape of head, but the outer foliage is green over-all without any signs of a red tinge.

Burpee's Celtuce

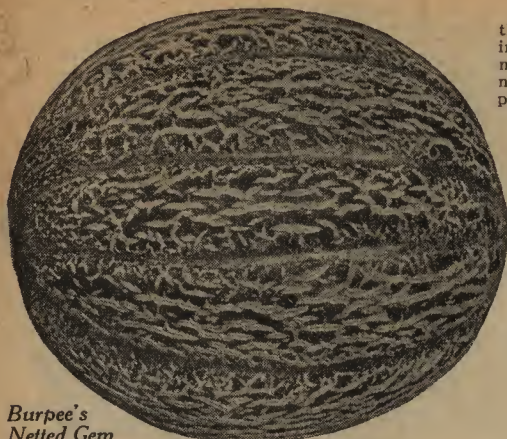

Burpee's CELTUCE Combines the uses and flavors of CELery and LetTUCE

290 Burpee's Celtuce, introduced by us in 1942, belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtuce stalks are to be eaten raw or cooked, you remove the lower leaves and then cut off all the outer skin and fibrous layers down to where they become light green and tender. Cooked celtuce stalks have a pleasing, mild flavor suggestive of celery but different and mild. Truly delicious. Young leaves have four times the vitamin C content of head-lettuce leaves.

The flesh is green and so sweet and luscious that it may be eaten close to the rind. Fruits are oval-shaped, firm and solid, weigh $1\frac{1}{2}$ to 2 lbs., slightly ribbed with medium-size seed cavity.

How to Grow Cantaloupes

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills"—a term that is misleading to many gardeners.

To really enjoy a muskmelon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. We offer the best varieties.

574 Burpee's Fordhook — Sweet and spicy

85 days. (*Orange Flesh*) Introduced by Burpee in 1908. Medium sized, flattened melon 4 in. long, 5 in. across with prominent ribs and broad gray netting. Flesh is bright orange, medium thick, fairly firm and sweet. An early, highly productive melon of convenient size for home and nearby market.

Pkt. 15¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.50

564 Bender's Surprise — Large, thick-oval

96 days. (*Salmon Flesh*) Delicious, large, thick-oval, greenish yellow melon, 8 in. long, 7 in. across, distinctly ribbed and coarsely netted. Bright salmon-colored flesh of superb sweet flavor. For the home garden, local market and roadside stands.

Pkt. 15¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.45

548 Pride of Fordhook — Extra choice

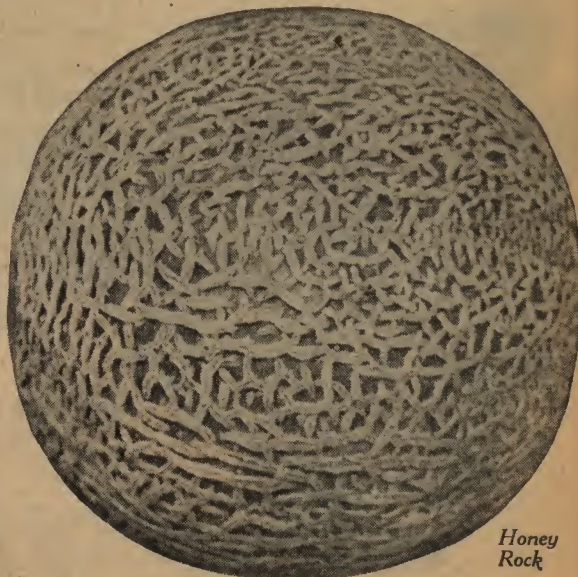

95 days. (*Orange Flesh*) Created on Burpee's Fordhook Farms in 1943. The large fruits are oval to nearly round in shape and weigh 4 to 5 lbs. each. Seed cavity is triangular, small and compact. Vigorous.

Pkt. 15¢; oz. 60¢; $\frac{1}{4}$ lb. \$1.75

560 Pride of Wisconsin — Firm flesh

Burpee's ONIONS

For flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable, onions are universally popular. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the descriptions. Onion sets are offered on page 101.

Evergreen Bunching

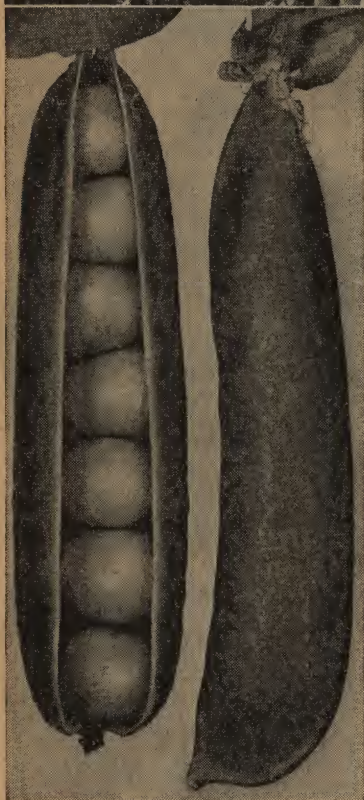

How to Grow Onions from Seed

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 101 for How to Grow Onions from Sets; we offer both the white and yellow.

Wrinkled-seeded peas, both early and main crop varieties, are favored by many for home and market growing, quick freezing and canning, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

Burpee's Blue Bantam

To enjoy the sweet, delicious flavor of peas, pick pods before they become fully developed and while still green; then cook as soon as possible, because they lose flavor rapidly.

Early Peas—Smooth-Seeded

Smooth-seeded peas are valuable for earliest crop, high yield and general hardiness. Seeds should be sown as early in the spring as ground can be worked as they do best when soil and weather are cool. Dwarf and medium-tall.

735 Mammoth Podded Extra Early —Medium-tall grower

60 days. Valuable large-podded, smooth-seeded, extra-early pea, adapted to home and market because of early maturity and large yields. Pods are broad, round, blunt, 3 in. long, medium green and contain 6 to 8 large peas of fine quality. Vines grow 30 in. high and freely produce their pods for a number of days. Main-Crop PEAS

Dwarf and Tall Growing

770 Fordhook Wonder — Dwarf

Introduced by Burpee in 1935 and
named for Burpee's Fordhook Farms

79 days. Extremely large pods, 5 to 5½ in. long, nearly round, dark green, and contain up to 10 extra-large peas that are sweet and most delicious. Quality is excellent; very good for freezing. For a main-crop home garden pea, or for markets where size of pods is important, we recommend Fordhook Wonder for any section where late peas do well. Plants are very vigorous, productive, dark green, coarse, 28 in. tall; peas are of the finest flavor and they retain their sweetness for an unusually long time after the pods are ready to pick. Valuable for shipping. Pkt. 25¢; ½ lb. 45¢; 1 lb. 75¢; 2 lbs. \$1.40; 5 lbs. \$3.25

785 Alderman or Tall Dark Podded Telephone

74 days. Depending upon growing conditions, vines grow 4½ to 6 ft. tall and require support. Very productive over a long bearing season. Pods 4½ to 5 in. and more in length, straight, pointed; well filled with 8 to 10 extra-large, extra-sweet peas which hold their green color well in cooking. An ideal, high quality pea of unsurpassed flavor for home, market, shipping and freezing. Does best in cooler regions as do all the largest podded varieties.

Pkt. 15¢; ½ lb. 35¢; 1 lb. 65¢; 2 lbs. \$1.20; 5 lbs. \$2.75

793 Carter's Daisy or Dwarf Telephone — Sweet, tender peas

79 days. Vines grow about 24 in. tall, are stout and invariably bear a good crop of attractive large pods, 4½ in. long, broad, slightly curved, and pointed, each containing 7 to 9 large, round, luscious peas. A standard market variety and popular medium-tall, large-podded pea for the home garden as the vines are short and bushy enough not to require support. Suitable for quick freezing as peas hold their tenderness well.

Pkt. 10¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.50

How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports (wire, brush or string) for the tall-growing varieties to climb upon. A pkt. will sow 20 ft. of single row; 1 lb. 100 ft.

EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. The following varieties are entirely free of fiber or parchment. Vines of the taller growing varieties should be given support of string or brush to climb upon for best results.

815 Mammoth Melting Sugar 75 days. Well-known, productive and resistant to fusarium wilt. The fleshy, tender, 4 to 4½ in. pods are light green, sometimes twisted, broad and blunt-ended, stringless, sweet and delicious. Pods are often sliced for cooking. The dried seed is large and white. Most widely used variety for home gardens; grown for market in some sections. Vines grow 4 to 4½ ft. tall and produce a heavy crop. Pkt. 15¢; ½ lb. 40¢; 1 lb. 70¢; 2 lbs. \$1.30; 5 lbs. \$3.00

811 Dwarf Gray Sugar 65 days. The earliest and dwarfest growing sugar pea. Pods 2½ to 3 in. long, light green, curved, sweet and tender. Vines grow 2 to 2½ ft. tall and are very prolific. Because of its dwarf habit, Gray Sugar is ideal for home gardens, especially where space is limited and seasons are short. Dried seed is small and mottled reddish gray. Pkt. 15¢; ½ lb. 35¢; 1 lb. 65¢; 2 lbs. \$1.20; 5 lbs. \$2.75

Roasted peanuts, salted peanuts, peanut butter and peanut candies are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2½ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the row, or place them 16 to 18 in. apart in the row if planted in the hulls. Cover with 2 in. of soil. Sow seed in a hotbed or indoors in shallow boxes, pots or seed-pans of rich soil, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is passed. When the soil has become warm, set the young plants in the garden, 18 to 24 in. apart in rows 2 to 3 ft. apart. A pkt. will produce about 100 plants; 1 oz. 1500. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until the first fruits are ready for table use.

California Wonder

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow. Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling either fresh or dried.

886 Crimson Giant Globe

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Thin to stand 1 to 2 in. apart in the row.

877 Burpee's Earliest Scarlet Button ☉

25 days. Introduced by Burpee in 1887. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Earliness, bright scarlet color, unusually brittle and delicious quality make it most desirable for home gardeners as well as the larger growers; small tops are just right for bunching. Retains its fresh appearance for quite a long time, and very slow to get pithy.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.00; $\frac{1}{2}$ lb. \$1.75

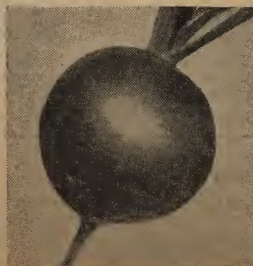

878 Burpee's Rapid Red ☉

23 days. Introduced by Burpee in 1906. Early, of fine quality, refined, smooth and attractive in appearance. Small, bright red and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. Flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crisper their flesh and the more delectable their flavor. A highly colored radish for home and market.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.00; $\frac{1}{2}$ lb. \$1.75

How to Grow Radishes

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{4}$ in. deep. Thin to stand 1 to 2 in. apart in the row. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown.

*Bloomsdale

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tama-pala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter? The number of days from sowing the seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this will vary according to locality where and the season when seed is sown.

1003 Virginia Blight Resistant

Nobel

How to Grow Spinach

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

It makes strong plants which resist heat and produce an abundance of fleshy, brittle green leaves and young stem tips that can be picked repeatedly all during the summer and fall. Plants attain a spread of 4 ft. when fully grown and thrive in any good soil in a warm location. One sowing will do for the season. It is not hardy so cannot stand frost. New Zealand Spinach (Tetragonia expansa)

SWISS CHARD

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthful and nutritious, easily grown vegetable. Chard stands hot weather and is an abundant, continuous yielder.

Leaves are rich dark green, much crumpled or savoyed, and when grown well, will measure 10 in. in width and 2½ ft. in length; texture is thick and fleshy. Burpee's Rhubarb Chard

How to Grow Swiss Chard

A pkt. will sow 25 ft. of row; an oz. 100 ft.

Burpee's TAMPALA SUMMER SPINACH

Burpee Fordhook Tampala—full grown plant

Amaranthus gangeticus

First introduced in America by Burpee in 1944

Within 6 to 8 weeks from sowing, Tampala is ready to use when the entire plants make the most delicious "greens" either raw as a salad or cooked as you would spinach. As a cooked, canned or quickly frozen green, Tampala is, in the opinion of many, superior to spinach or Swiss Chard—more appetizing color, flavor more delicious, shrinks very little, holds its color better and is easier to prepare. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor being suggestive of artichokes. Try Tampala.

1375 Burpee Tampala—Light green

Delicious green vegetable raw or cooked which has been enjoyed by the Chinese and the people of India for centuries. Introduced by us as "Tampala" by which name it is known in India. Leaves are light green in color.

Pkt. 20¢; ¼ oz. 80¢; oz. \$2.25

1377 Burpee Fordhook Tampala

Darkest green-leaved selection of this newly recognized green leafy vegetable which has an unusually long period of usefulness in the summer garden.

Pkt. 25¢; ¼ oz. \$1.00; oz. \$3.00

How to Grow Tampala

Being a so-called hot-weather plant, seed should not be sown until the soil has become thoroughly warm. Make several successive sowings 10 days to 2 weeks apart and, for the most tender leaves, use entire young plants when 6 to 10 in. high. However, a plant may be left every 2 ft. and leaves picked as they mature.

Fall and Winter SQUASH

All, except the Banana squashes, produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter va-

rieties, except Banana, must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

1038 True Hubbard — Widely used for home, market and shipping; delicious flavor

115 days. Fairly large fruits with dark bronze-green warted skin, the toughness of which makes it a favorite for shipping and winter use; if properly stored, will keep until spring. 12 in. long and 10 in. thick; weigh about 12 lbs. Attractive deep orange-yellow flesh which is fine-grained, sweet and dry. The standard winter squash for all purposes, whether for freezing, home, market or shipping. 1022 Blue Hubbard 120 days. Attractive blue-gray, slightly ridged fruits which grow larger than the True Hubbard. The shell is rough and very hard, so keeping qualities are good; flesh is bright yellow-orange, fine-grained, dry and exceptionally sweet. Desirable for freezing. How to Grow Squash

Summer Squash. Sow seed after all danger of frost has passed. Put 5 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 3 or 4 of the strongest plants remain in a group; running varieties allow 2 or 3 plants to a group. They may, like pumpkins, be planted among the corn. Pkt. will plant 8 to 10 groups; an oz. 30 to 40 groups.

Winter Squash. Sow seed in the same way as given above for the running varieties of summer squash; 4 seeds in a group is sufficient. A pkt. will plant 6 to 8 groups; 1 oz. 20 to 30 groups. All varieties of squash grow best in a fertile, deep soil.

Burpee's TURNIPS

At their best when growth is made during cool weather. Plant the Extra Early Milan varieties in the spring for their roots and the foliage types for their tops which are much used for "greens." Sow any variety in late summer for fall use or storing of the roots for use during the winter—Purple-Top White Globe being the most popular variety. Frost improves the flavor of foliage turnips.

Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leafmold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. How-to-grow directions are sent with the bulbs. You may order 6 bulbs of the same variety at $\frac{1}{2}$ the 12 rate.

Regal Lily

7251 Regale album Same habit of growth as Regal; the flowers, however, are pure white. They are just as easy to grow, perfectly hardy, established plants having as many as 25 blooms to a stem. Clusters of blooms at the top of tall, wiry stems during July. One of the most beautiful and easiest grown of all lilies, the individual flowers measure about 6 in. in length and $4\frac{1}{2}$ to 5 in. across. Grow 3 to 5 ft. high.

7242 EXTRA LARGE BULBS These will produce many more flowers per plant the first year than the large bulbs. **50¢ each; 3 for \$1.35; 12 for \$5.00; 25 for \$8.75**

7249 LARGE BULBS Shorter spikes with fewer flowers than the above—the size preferred by many for the largest number of flower spikes at low cost. At these low prices, a splendid opportunity is afforded you to plant this beautiful hardy garden lily in quantity. More floriferous with age.

SPECIAL: 5 for \$1.00; 12 for \$2.25; 100 for \$18.00

7245 Canadense (Canadian Lily) Lovely, nodding, bell-shaped flowers, usually yellow but often shade to deeper orange. They are heavily dotted purplish black on the inside and are borne in clusters during late June and July. Does well in partial shade. Graceful and pretty native lily that seems to do best in a damp or moist location but soil must be well drained. It will, however, do well in any good garden soil but will do better if soil is mixed with leaf mold such as is found in the woods. Ideal for naturalizing. Grows 3 ft. and more tall. **45¢ each; 3 for \$1.20; 12 for \$4.50; 25 for \$8.50**

7246 Centifolium hybrids Immense, white, funnel-shaped, fragrant flowers, the outside varying from emerald-green through tints of pink to brownish purple. 7248 Orange Triumph Erect, large, broad-petaled, cup-shaped light pinkish orange flowers faintly spotted maroon and produced in clusters of 7 or 8 atop strong 4 ft. plants in July and August. Tigrinum giganteum or Giant Tiger Lily

7261 *Lily Rothschildiana* GLORIOSA LILY

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Lily Rothschildiana is exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

This unique and interesting lily is a species discovered in East Africa. Early records show it was grown on the estate of the Hon. Walter Rothschild of England, for whom it was named. \$1.25 each; 3 for \$3.50; 12 for \$12.50

Dahlias are Lovely for Cutting

They will last longer if, after they are cut, the lower leaves are removed and the stems plunged in water as hot as the hand can bear. When the water cools, put flowers in a container of cold water. Keep away from heat and drafts.

Pompon Dahlias

POMPON DAHLIAS

Pompon Dahlias have always been favorites with flower lovers and dahlia fanciers. These smallest of all dahlias combine so many pleasant features that they justly deserve a place in every garden. They grow most freely, require little care after planting, and bring forth a wealth of blooms, rewarding the grower with a generous supply of gorgeous cut flowers during the late summer and fall. Plants are of stocky growth, quite branching and extremely free flowering. Nice for borders; invaluable for table decoration, as they keep in good condition for a long while after cutting.
